Rota anually SoSe Duration 1 Semester Semester 2nd Credits 5 1 Module Structure 5 1 Mobile Radio Networks 1: Fundamentals and Design Aspects: Lecture 1 2 Mobile Radio Networks 1: Fundamentals and Design Aspects: Lecture 2 2 Mobile Radio Networks 1: Fundamentals and Design Aspects: Lab Course 2 2 Language English 5 3 Content 1. 1. Market aspects and historical development of mobile communicat 2. System aspects (characteristics of propagation, subscriber mobility allocation, network planning, protocols) 3. TDMA- und CDMA-based cellular networks (2G GSM/GPRS/EDGE, 4. 4. System architecture of OFDMA-based cellular networks (4G LTE) The discussion of theoretical content is complemented by practical demo ongoing research and business aspects of mobile radio networks. Literature (respective latest version) Walke, B.: Mobile Radio Networks, Wiley Rappaport, Theodore S. Wireless communications: principles and practic Dahlmann, E.; Parkvall, S.; Sköld, J.: 4G: LTE/LTE-Advanced for Mobile Brod After successful completion of the module, students understand the syst dimensioning and operation of mobile radio networks. Students are able challenges of using wireless networks in different deployment environme make a technically sound selection. In this way, they acquire the compet or to study more a	spects	AF	R-234
